

Table S2. Factors associated with the open-label aspirin dose at day 1 according to the logistic regression analysis

Factors	Odds Ratio with 95% CI	P value
Age	1.00 (0.99-1.01)	0.85
Male vs. female	0.95 (0.78-1.15)	0.59
Medical history		
Previous TIA or stroke	0.95 (0.79-1.14)	0.56
Hypertension	0.81 (0.69-0.96)	0.01
Diabetes mellitus	0.94 (0.78-1.14)	0.53
Dyslipidemia	0.91 (0.71-1.17)	0.48
Myocardial infarction	0.97 (0.68-1.39)	0.88
Known atrial fibrillation	1.12 (0.64-1.95)	0.69
Current or previous smoking	0.85 (0.70-1.04)	0.12
High blood pressure at baseline	1.24 (1.03-1.49)	0.03
BMI at admission	0.98 (0.96-1.01)	0.20
Time from onset to randomization < 12 hours	0.92 (0.79-1.07)	0.26
Qualifying event: Minor stroke vs. TIA	1.27 (1.07-1.51)	0.007

TIA denotes transient ischemic attack; BMI, body mass index; High blood pressure is defined as systolic blood pressure >140mmHg or diastolic blood pressure >90 mmHg.
