

Supplemental Figure 1: Kaplan Meier curves displaying the risk of stroke or death (y-axis) in CREST after excluding strokes that occur in the perioperative period.

Supplemental Figure 2

Calibration of stroke (panel A) and MI (panel B) treatment models. Blue bars represent actual proportion in each risk quintile with perioperative stroke/death (panel A) or MI (panel B), red bars represent proportion of population with predicted perioperative stroke/death (panel A) or MI (panel B) in each quintile.

Supplemental Figure 3: Distribution of baseline stroke risk (x-axis) vs. MI risk (y-axis).

Correlation coefficient – 0.28.
