Appendix 5 - UK biobank codes for dementia diagnosis and classification

Dementia diagnoses were collected from electronic health records, hospital admissions data and death register data from NHS Digital. All-cause dementia was diagnosed according to the International Classification of Diseases ICD-9 codes (290, 291.2, 294.1, 331.0-331.2, 331.5, 331.0 and 290.4) and ICD-10 codes (A81.0, F00, F01, F02, F03, F05.1, F10.6, G31.0, G31.1, and G31.8), if any of the above codes presented a primary or secondary diagnosis in the health records, or presented as a potential cause of death in the death register. AD was defined as code 331.0 in ICD-9 and codes F00 and G30 in ICD-10; VaD was defined as codes 290.4 in ICD-9 and codes F01 and I67.3 in ICD-10. In addition, dementia diagnoses were also retrieved from primary care data using Read codes (version 2 [Read v2] and version 3 [CTV3 or Read v3]).

Algorithmically-defined health outcomes

To aid researchers, UK Biobank have generated algorithmically-defined health outcomes using the self-reported health information, hospital inpatient data and death data, providing information on first diagnosis, for each participant, of a small number of health conditions.

First occurrences of medical conditions

A set of 'first occurrence' data-fields have been generated that map the clinical codes from primary care, hospital inpatient admissions, death records and self-reported medical conditions to 3-character ICD-10 codes and provide, for each participant, the date that code first occurred in any source.

Death data

Linkage to national death registries provides notifications of participant deaths (if in the UK), containing data on date and cause(s) of death. These are coded using ICD-10.

Hospital inpatient data

Hospital inpatient data are available for the full cohort. This provides information on hospital admissions for each participant and includes data on date of admission, diagnosis (and underlying conditions) during admission, procedures and discharge information. These are coded using ICD-9, ICD-10, OPCS-3 and OPCS-4.

Primary care data

Primary care data for ~230,000 UK Biobank participants (up to 2016 or 2017 depending on the data supplier) was made available in 2019. This dataset contains data from the GP system suppliers and contains coded clinical events (including consultations, diagnoses, procedures and laboratory tests), prescribed medications (including prescription date, drug code and, where available, drug name and quantity) and a range of administrative codes (e.g. referrals to specialist hospital clinics). The data are coded using READ2, CTV-3, BNF and DM+D.
