

**Table S7. Outcomes after Ischemic Stroke or TIA Based on the Distribution of 3-Month Composite Persistence**

| Outcomes                  | Composite persistence | No.(%)     | Events,<br>n (%) | Model 1*                    |         | Model 2†                    |         |
|---------------------------|-----------------------|------------|------------------|-----------------------------|---------|-----------------------------|---------|
|                           |                       |            |                  | Adjusted HR<br>/OR (95% CI) | P value | Adjusted HR<br>/OR (95% CI) | P value |
| <b>Stroke</b>             | Level 1               | 4397(24.0) | 134(3.1)         | 1.00(Ref)                   |         | 1.00(Ref)                   |         |
|                           | Level 2               | 5064(27.6) | 72(1.4)          | 0.47(0.35-0.63)             | <0.001  | 0.41(0.31-0.55)             | <0.001  |
|                           | Level 3               | 8883(48.4) | 109(1.2)         | 0.41(0.32-0.53)             | <0.001  | 0.37(0.29-0.48)             | <0.001  |
| <b>Ischemic stroke</b>    | Level 1               | 4397(24.0) | 127(2.9)         | 1.00(Ref)                   |         | 1.00(Ref)                   |         |
|                           | Level 2               | 5064(27.6) | 63(1.2)          | 0.44(0.32-0.59)             | <0.001  | 0.38(0.28-0.52)             | <0.001  |
|                           | Level 3               | 8883(48.4) | 98(1.1)          | 0.39(0.30-0.51)             | <0.001  | 0.35(0.27-0.46)             | <0.001  |
| <b>Hemorrhagic stroke</b> | Level 1               | 4397(24.0) | 4(0.09)          | 1.00(Ref)                   |         | 1.00(Ref)                   |         |
|                           | Level 2               | 5064(27.6) | 7(0.14)          | 1.46(0.43-5.01)             | 0.55    | 1.29(0.37-4.53)             | 0.69    |
|                           | Level 3               | 8883(48.4) | 6(0.07)          | 0.73(0.20-2.58)             | 0.62    | 0.72(0.20-2.63)             | 0.62    |
| <b>Composite events‡</b>  | Level 1               | 4397(24.0) | 159(3.6)         | 1.00(Ref)                   |         | 1.00(Ref)                   |         |
|                           | Level 2               | 5064(27.6) | 86(1.7)          | 0.47(0.36-0.62)             | <0.001  | 0.41(0.31-0.53)             | <0.001  |
|                           | Level 3               | 8883(48.4) | 136(1.5)         | 0.43(0.34-0.55)             | <0.001  | 0.39(0.30-0.49)             | <0.001  |
| <b>All-cause death</b>    | Level 1               | 4397(24.0) | 367(8.4)         | 1.00(Ref)                   |         | 1.00(Ref)                   |         |
|                           | Level 2               | 5064(27.6) | 114(2.3)         | 0.30(0.24-0.37)             | <0.001  | 0.30(0.24-0.37)             | <0.001  |
|                           | Level 3               | 8883(48.4) | 129(1.5)         | 0.20(0.16-0.24)             | <0.001  | 0.19(0.16-0.24)             | <0.001  |
| <b>Disability</b>         | Level 1               | 3733(22.5) | 595(15.9)        | 1.00(Ref)                   |         | 1.00(Ref)                   |         |

|                  |         |            |            |                 |      |                 |       |
|------------------|---------|------------|------------|-----------------|------|-----------------|-------|
| <b>(mRS=3-5)</b> | Level 2 | 4698(28.4) | 650(13.8)  | 0.93(0.82-1.05) | 0.24 | 0.91(0.78-1.05) | 0.18  |
|                  | Level 3 | 8133(49.1) | 1076(13.2) | 0.88(0.79-0.99) | 0.03 | 0.81(0.71-0.93) | 0.002 |

CI, confidence interval; HR, hazard ratio; OR, odds ratio; Ref, Reference; mRS, modified Rankin Scale.

Composite persistence was defined as the percentage (0% to 100%) of discharge medication classes that patients were still taking at 3 months. Level 1: 0% ≤ persistence < 25%; Level 2: 25% ≤ persistence < 75%; Level 3: 75% ≤ persistence ≤ 100%.

\*Model 1: adjusted for age and sex.

†Model 2: adjusted for patient and hospital characteristics, including age, sex, ethnicity, education level, health insurance, family income per month, history of hypertension, diabetes, dyslipidemia, atrial fibrillation, myocardial infarction, coronary artery disease, previous TIA or stroke, ever smoking, and drinking, admission NIHSS score, type of disease, severity of illness at discharge, new stroke within 3 months, hospital grade, region, teaching hospital, stroke unit, hospital beds and No. of neurological ward beds.

‡Composite events: stroke, myocardial infarction, or death from cardiovascular cause.

HR for stroke, composite events and all-cause death; OR for disability.
