CI, confidence interval; HR, hazard ratio; OR, odds ratio; mRS, modified Rankin

Scale.

\*Model 1: adjusted for age and sex.

†Model 2: adjusted for patient and hospital characteristics, including age, sex, ethnicity, education level, health insurance, family income per month, history of hypertension, diabetes, dyslipidemia, atrial fibrillation, myocardial infarction, coronary artery disease, previous TIA or stroke, ever smoking, and drinking, admission NIHSS score, type of disease, severity of illness at discharge, new stroke within 3 months, hospital grade, region, teaching hospital, stroke unit, hospital beds and No. of neurological ward beds.

‡Composite events: stroke, myocardial infarction, or death from cardiovascular cause.

HR for stroke, composite events and all-cause death; OR for disability.
