

SUPPLEMENTAL MATERIAL

Magnitude of systolic blood pressure reduction following endovascular treatment and clinical outcomes in acute large artery occlusion stroke

1. Supplementary table S1. Demographics and baseline characteristics in overall cohort.
2. Supplementary table S2. Association of SBP reduction with sICH in overall patients.
3. Supplementary table S3. Demographics and baseline characteristics in patients with unsuccessful reperfusion.
4. Supplementary table S4. Sensitive analysis using the BP in the emergency room as the baseline BP in patients with successful reperfusion.
5. Supplementary figure S1. Sensitive analysis for with or without antihypertensive treatment in a center.

Table S1. Demographics and baseline characteristics in overall cohort.

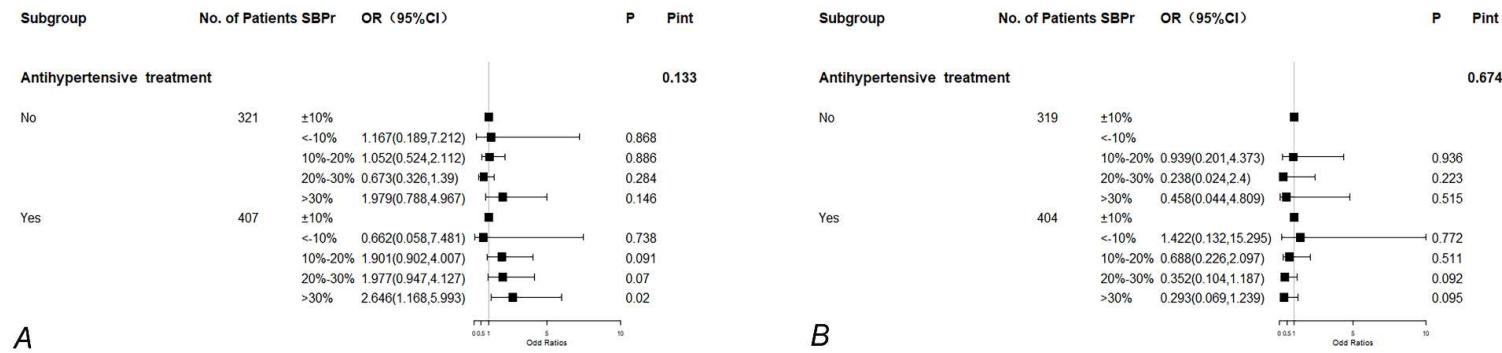

Figure S1. Sensitive analysis for with or without antihypertensive treatment in a center. (A) Relationship between SBP reduction and poor outcome; fully adjusted indicates odds ratios (ORs) adjusted for age, sex, history of hypertension, diabetes mellitus, antihypertensive treatment, TOAST, baseline NIHSS and ASPECT, occlusion site and collateral circulation analyzed using a multivariable logistic regression model. (B) Symptomatic intracerebral hemorrhage; adjusted for baseline NIHSS, ASPECT and collateral circulation.
